

INCIDENT MANAGEMENT SITUATION REPORT
THURSDAY, MARCH 23, 2006 – 0800 MST
NATIONAL PREPAREDNESS LEVEL 2

CURRENT SITUATION:

Initial attack activity was moderate nationally with 354 new fires reported. One new large fire was reported and contained in the Southern Area. Very high to extreme fire indices were reported in Arizona, Kansas, South Dakota, Nebraska, Wyoming, Virginia, Florida, and Massachusetts.

The National Interagency Fire Center has requested assistance from the Department of Defense for MAFFS air tanker support. Mission Commander Lieutenant Colonel Jeff Perryman, two MAFFS C-130 air tankers and support personnel from the 145th Tactical Airlift Wing based in Charlotte, North Carolina are providing support. The MAFFS are based in Albuquerque, New Mexico in support of the Southwest, Rocky Mountain and Southern Areas.

SOUTHERN AREA INCIDENTS/LARGE FIRES:

WEST TEXAS IA, Texas Forest Service. A Texas State Type 2 Incident Management Team (Hanneman) is in place in Granbury, TX. Preparations are being made to relocate the Incident Command Post (ICP) to Midland, TX. The Team is assisting local jurisdictions with managing existing fires and initial attack within the 220,000 square mile West Zone fire management response area. In addition, Type 2 Incident management Team (Hinds) is working in support of West Texas IA, located in Midland, TX and will be supporting extended attack fires in the zone. No new fires were reported. Rain has mitigated fire potential in some areas of the zone. Those areas that did not receive significant rain continue to have high potential for rapid fire spread. Acres, structure losses and costs have been adjusted to represent cumulative fire activity for the response area.

OKLAHOMA FIRE RESPONSE, Oklahoma State. An Oklahoma State Type 2 Incident Management Team (Couch) is assigned in Shawnee, OK. The Team is assisting local, state and federal jurisdictions with managing existing fires and initial attack in Oklahoma. The Oklahoma National Guard is assisting with two helicopters. Twenty new fires for 261 acres were reported. Demobilization of excess resources is continuing. Acres, structure losses and costs have been adjusted to represent cumulative ABC Miscellaneous fire activity statewide since January 1.

MENDOTA ROAD, Virginia Department of Forestry. This fire is ten miles northwest of Abington, VA in hardwood litter. No new information was reported. This will be the last report unless new information is received.

NO MAN'S LAND, Ouachita National Forest. This fire is seven miles west of Black Springs, AR in hardwood litter and brush. Minimal fire activity was reported. The reduction in acreage is due to more accurate mapping.

EAQ – Eglin Air Force Base

OUTLOOK:

Weather Discussion: A low pressure system will bring showers to portions of the Southeast while high pressure brings dry weather to the Southwest, Texas and Oklahoma.

Geographic Area Weather	High Temperatures	Minimum Relative Humidity	Wind
Southwest Area Mostly sunny, warmer and locally breezy across Arizona and western New Mexico. Partly cloudy and cool eastern New Mexico and west Texas.	55 to 80 lower elevations of Arizona and western New Mexico. 35 to 55 in the mountains and across eastern New Mexico and west Texas.	10 to 20% lower elevations of Arizona and western New Mexico. 20 to 40%+ in the mountains and across eastern New Mexico and west Texas.	East to northeast 10 to 20 mph southern Arizona and southwest New Mexico. Variable to northeast 5 to 15 mph remainder of Arizona, New Mexico and west Texas.
Southern California Area Partly cloudy	50 to 65 mountains. 70 to 80 valleys. 65 to 75 upper deserts. 75 to 85 lower deserts.	10 to 20%.	Northeast to southeast 5 to 15 mph.
Rocky Mountain Area No information was reported.			
Southern Area No information was reported.			
Eastern Area No information was reported.

DOWNHILL FIRELINE CONSTRUCTION CHECKLIST

Downhill fireline construction is hazardous in steep terrain, fast-burning fuels, or rapidly changing weather. Downhill fireline construction should not be attempted unless there is no tactical alternative. When building downhill fireline, the following is required:

Crew supervisor(s) and fireline overhead will discuss assignments prior to committing crew(s). Responsible overhead individual (TFLD or ICT4 qualified or better) will stay with job until completed.

Decision will be made after proposed fireline has been scouted by supervisor(s) of involved crew(s).

LCES will be coordinated for all personnel involved.

- Crew supervisor(s) is in direct contact with lookout who can see the fire.
- Communication is established between all crews.
- Ensure rapid access to safety zone(s) in case fire crosses below crew(s).

Direct attack will be used whenever possible; if not possible, the fireline should be completed between anchor points before being fired out.

Fireline will not lie in or adjacent to a chute or chimney.

Starting point will be anchored for crew(s) building fireline down from the top.

Bottom of the fire will be monitored; if the potential exists for the fire to spread, action will be taken to secure the fire edge.
